Location & Local Information

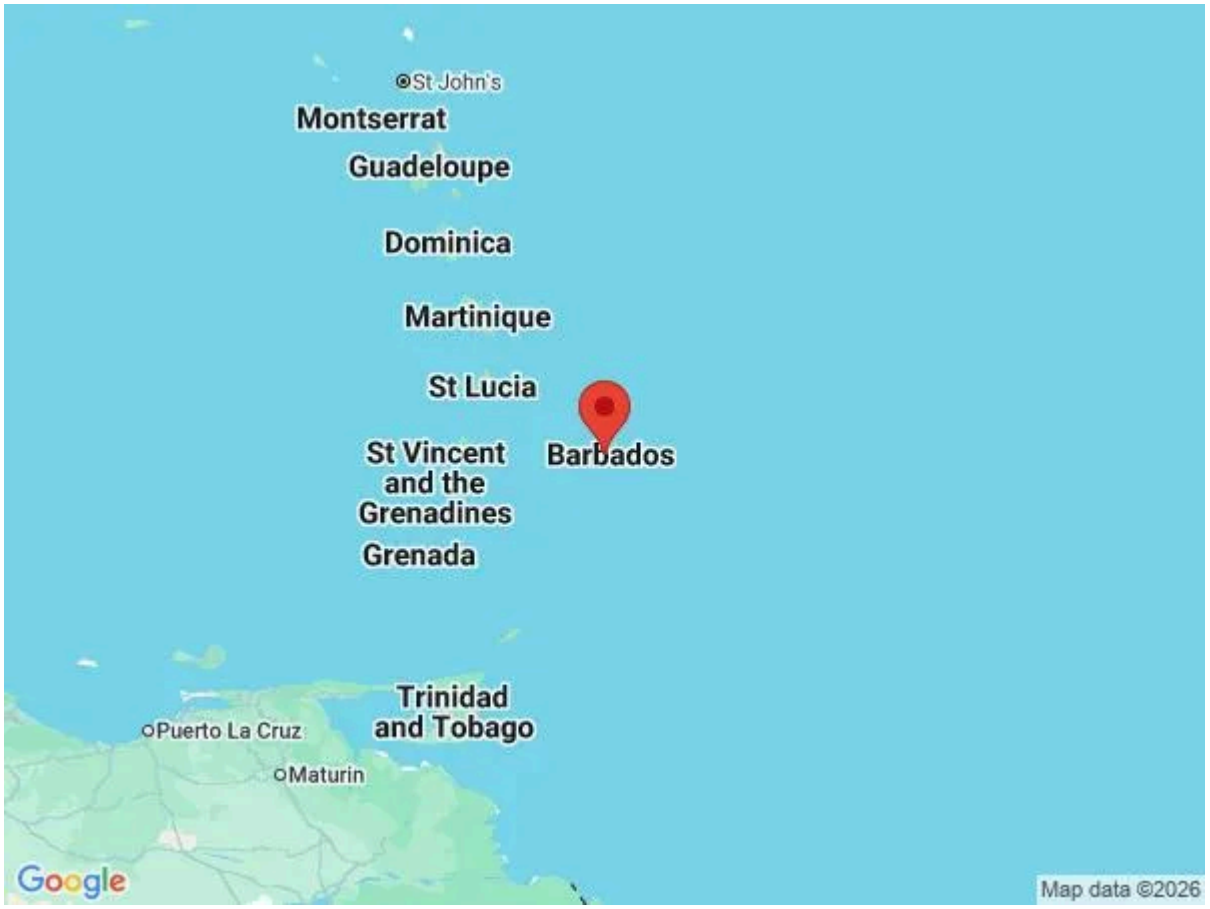

Barbados is a truly phenomenal holiday destination, and geologically unique; a coral island, initially pushed from the sea as two separate land masses by volcanic activity many years ago. Over time these two land masses merged together creating the isle we now know as Barbados. Barbados lies on the boundary of the Caribbean and South American continental plates making it unlike any other Caribbean Island. Within the core of the island, made up mainly of coral sediment, numerous caves and underground lakes can be found. Arguably the most famous of these is Harrison's Cave; a network of caves, waterfalls, pools and fantastic stalagmites and stalactites.

The East Coast of Barbados has fantastic and lively surfing opportunities, blown briskly by the strong and constant trade winds; the constant breeze of these trade winds give Barbados its mild and pleasant tropical climate. Along the east coast, huge Atlantic waves crash along the shore and so the beaches are better suited for walks and sun-bathing, with a few enchanting places to have a dip in the sea – as the waves break over rocks and reefs, small pools are formed close to shore forming delightful natural swimming pools!

Whilst on Barbados, a taste of the island's rum is a must! The isle has been producing rum for over 350 years, and it is recognised internationally for its quality. Many tours and taste sessions are available at the local distilleries.
